A. H. Sayed

LETTERS

Digital and Multirate Signal Processing
Some Properties of an Empirical Mode Type Signal Decomposition Algorithm
S. D. Hawley, L. E. Atlas, and H. J. Chizeck

Image and Multidimensional Signal Processing
Semi-Supervised Nonnegative Matrix Factorization
H. Lee, J. Yoo, and S. Choi
Structural Similarity Measure to Assess Improvement by Noise in Nonlinear Image Transmission
D. Rouxseau, A. Delathiaux, and F. Chapeton-Blondeau
A Contrast Enhancement-Based Filter for Removal of Random Valued Impulse Noise
Multiple Description Distributed Video Coding Using Redundant Slices and Lossy Syndromes
S. Milani and G. Calvagno
A Fast Algorithm for Recognizing Translated, Rotated, Reflected, and Scaled Objects From Only Their Projections
Y. Wan and N. Wei
A Comparison Between ULP and MDC With Many Descriptions for Image Transmission
E. Baccaglini, T. Tillo, and G. Olmo
Registration of Images With Outliers Using Joint Saliency Map
B. Qin, Z. Gu, X. Sun, and Y. Lv
A Novel Template Matching Scheme for Fast Full-Search Boosted by an Integral Image

(Contents Continued on Page 2)
## Multimedia Signal Processing

- Analysis of the Security of Perceptual Image Hashing Based on Non-Negative Matrix Factorization
- Efficient Level and Zero Coding Methods for H.264/AVC Lossless Intracoding
- Sensor Array and Multichannel Signal Processing
- Cramer–Rao Bound for MIMO Radar Target Localization With Phase Errors
- Signal Processing for Communications
  - GMP-Based Channel Estimation for Single-Carrier Transmissions over Doubly Selective Channels
  - A Power Allocation Method for DMT-Based DSL Systems Using Geometric Programming
  - An Adaptive Constant Modulus Blind Equalization Algorithm and Its Stochastic Stability Analysis
  - Sequence Sets With Optimal Integrated Periodic Correlation Level
  - Acoustic Data Transmission Based on Modulated Complex Lapped Transform

## Speech Processing

- Split Table Extension: A Low Complexity LVQ Extension Scheme in Low Bitrate Audio Coding
- Retrieving Sparse Patterns Using a Compressed Sensing Framework: Applications to Speech Coding Based on Sparse Linear Prediction

## Speech Recognition

- Automatic Optimization of Speech Decoder Parameters
- Statistical and Adaptive Signal Processing
  - Adaptive Noise Variance Estimation in BayesShrink
  - Low-Resolution Face Recognition via Coupled Locality Preserving Mappings
  - Convergence of the Multidimensional Minimum Variance Spectral Estimator for Continuous and Mixed Spectra
  - The Equivalency of Minimum Error Entropy Criterion and Minimum Dispersion Criterion for Symmetric Stable Signal Processing
  - Linear Systems, Sparse Solutions, and Sudoku
  - Blind Extraction of Smooth Signals Based on a Second-Order Frequency Identification Algorithm
